Greetings

Greeting Parents,

Dear Heguru Families,

"You can't build a great building on a weak foundation. You must have a **solid foundation** if you're going to have a strong superstructure" **Gordon B. Hinckley**.

"A tree with strong roots laughs at storms" **Malay Proverb**.

Having **strong roots** and **strong foundation** in our child is important! With strong roots and strong foundation in your child, he/she will grow into someone who is confident and high achiever!

That is what HEGURU is trying to build in our children. HEGURU can grow our children to use the right brain, left brain and heart in balance throughout the whole world.

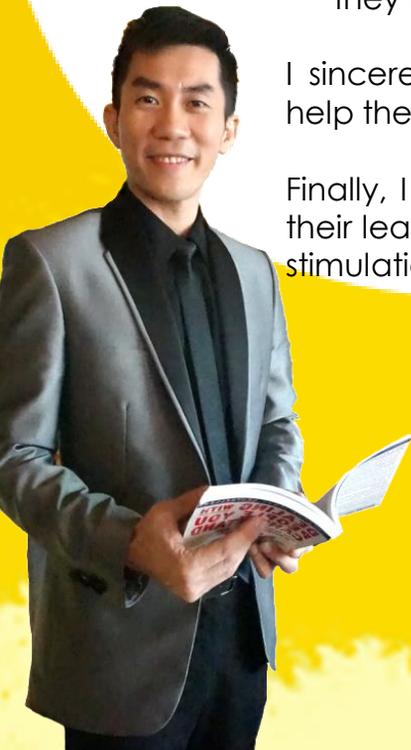

There are very important points to remember when parents want to effectively develop those 3 abilities in their children:

1. The younger your child starts (**GOLDEN AGE = 0-3 YEARS OLD**), the faster he/she will be able to master his/her abilities. We appreciate and thank you parents for giving your children opportunity.
2. No child is "too young" to start such an education.
3. Let's develop the potential of your children at the early age when they are still young, obedient and adorable.

I sincerely hope that this awareness will give us greater wisdom to help them to achieve their maximum potential.

Finally, I would like to encourage you to continue to always extend their learning at home. This will help your child to get the best of brain stimulation possible.

Warmest regards,
Mr. Suryanto Lim
Principal Heguru Academy

HOW YOUR BABY CAN LEARN: ADVICE FROM AN EXPERT

Do I need to make silly sounds and faces to my baby? Can I just speak to them in a normal manner?

It is okay to make silly faces and occasionally make silly sounds to babies, but for the most part, you should be talking in a more normal voice. It's actually called "parentese" where one speaks with a slightly higher pitched voice and slightly over-enunciates.

For example: "I am HOLDING a BOOK" "The BOOK is ABOVE my HEAD" So how you emphasise the words and how you speak can actually attract the baby's attention. By over-enunciating it's easier for them to learn words, as many words in English and other languages sound very similar to one another a sophist can help the child differentiate the words.

My baby babbles a lot. Is this a good sign?

Yes, early in life it's a good sign. If your baby babbles and makes some kind of language-related sound then you should repeat back those sounds to the baby and try to have a "conversation" with your baby by making sounds back and forth.

Article

My baby is not babbling or making any noise at all. Is this a bad sign?

It depends on the age of the baby, I don't want to alarm the parents. But for the most part, don't allow your baby to have a pacifier or dummy and if the baby is not making a lot of sounds I would definitely recommend getting the child's hearing checked.

From your research, what is the best way for babies to learn?

It depends on what they are learning but I believe in a multisensory interactive approach so the baby would get to see things, hear things, and physically do things. No matter what kind of learner someone is; a physical learner, a visual learner, or an auditory learner, this approach should be effective. If you use a multisensory approach then the baby gets to learn through many different sensory systems so that would be preferred. It should also be interactive, not passive, so the baby is responding by doing things or saying words

Is there such a thing as overstimulation? How can I prevent this from happening?

If the baby is not enjoying it, then I would stop and take a break — maybe go outside and do some other kind of activity and then go back and try again. Usually, though, I found that parents are the ones who get tired and not the baby because the parents take a lot of energy to stimulate the baby properly and almost always the parents will get tired before the baby.

Screen time for babies – yes, no? What is your take on this and recommended age that babies should be exposed to them?

It depends on what the baby is looking at, so for instance, your tablet, phone, or television can be showing something that's extremely important or educational or they could be showing a mindless cartoon. I don't believe that babies, whose brains are developing so rapidly, should be watching entertainment-based mindless cartoons.

The TV screen itself is not going to harm the baby, as long as the television is 6 to 8 inches away from the baby, then it's not going to harm the child – it just depends on the content whether it is good or bad for the baby. Babies generally do not have good enough vision to watch a television effectively until they are about 2 or 3 months of age, so I wouldn't do it before 2 months and I would recommend introducing only educational programming to the baby around 2 or 3 months of age at the earliest.

What are some fun learning activities I can do with my infant to stimulate their brain?

I like to teach music and teaching language skills – those would be two of the more important activities. Teaching numbers can also be a lot of fun and have long-term positive benefits. It is extremely important for parents to teach babies language skills.

One interesting fact that most parents do not know about babies is...

That the actual brain processing speed changes based on the language environment they've had. So by 18th month of age babies think at a faster or slower speed based on the language environment they've had. That is interesting but also lets parents realise how important it is that they provide a rich language environment for their newborn and all the way until 18th months and beyond.

Testimony

Heguru[®] family

Claire Olivia Carsten

Mr. Ferdinand & Ms. Veronica

Joined Heguru: July 2017

Claire starts with Heguru since she was 8 months old in 0-1 years old class. She enjoyed the class from the first day she joined Heguru.

Before turning 1 year old, Claire already understands flash card when we asked her to pick some of them. In terms of following instructions, she can do it easily with looking at us doing it just once. For instance, throwing her trash into the bin.

Besides that progresses, another amazing thing that we observed about Claire is her confidence and social ability compare to her friends at the school. We also see her focus is so much better compared to her friends of similar age.

In Heguru classes, she really loves singing, dancing and doing imagination.

In our opinion, Heguru helps our daughter's improvement a lot. This method is really beneficial for children and the teachers also contributes greatly to a caring and supportive environment for her to grow.

Thank you Heguru.

IMAGE TRAINING

Image Training is one of fun activities in Heguru which aims to trigger children's imagination. Doing activities that use a lot of imagination will build the creativity of children. Besides, it also helps them to receive the other activities in the class easily.

They should try to see the real image of their imagination. The more they can feel, it means they are able to achieve the higher dimension in their learning.

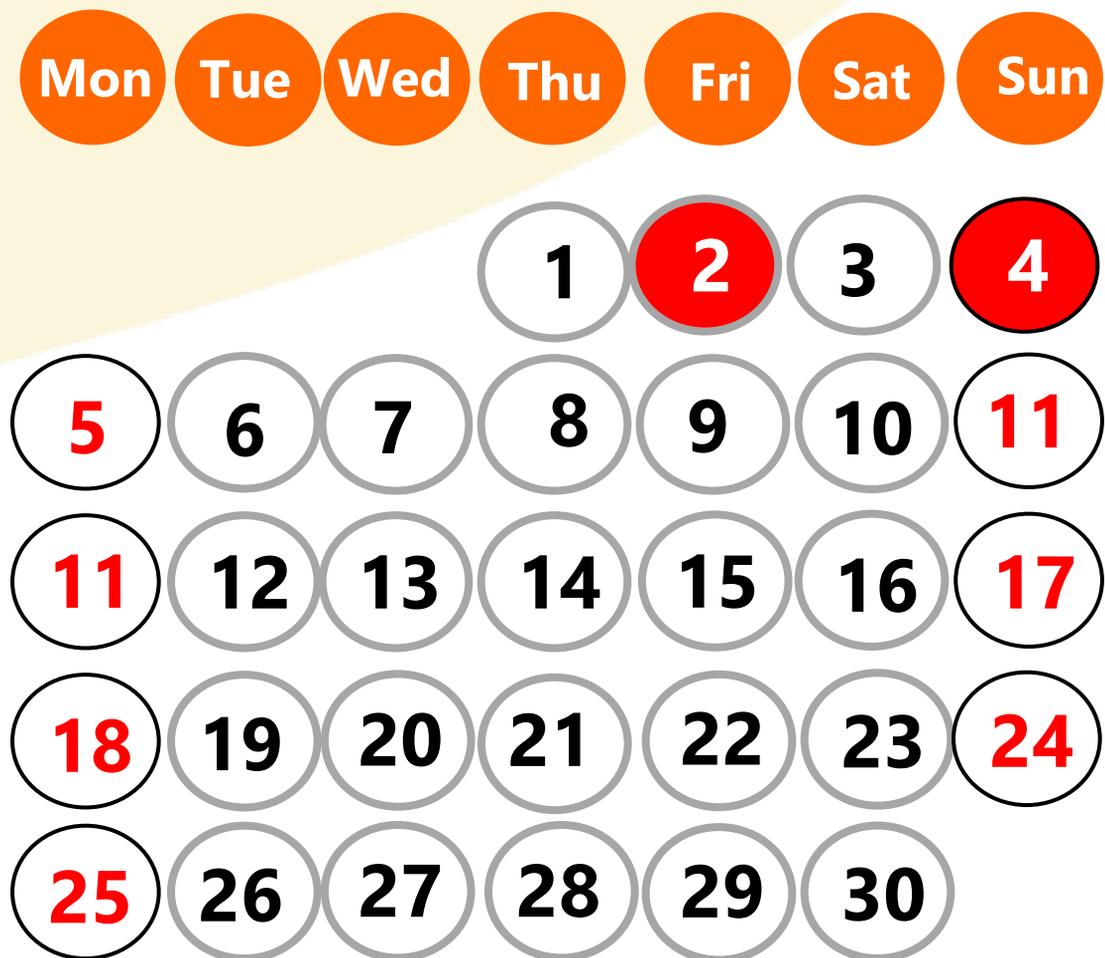

When doing this kind of activity we believe children are able to imagine their own image and situation beyond teacher's story. And that is a good sign for their development.

Calendar of the Month

April 2021

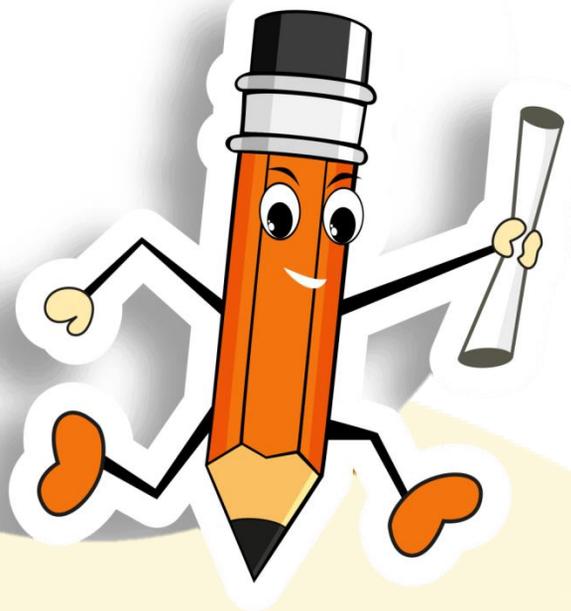

Dates to Remember	
2 April 2021	Good Friday
4 April 2021	Easter Day
2-10 April 2021	Eggciting Easter Promo
